Easi: 13.3.9.50
The sequence contained an oligo-dT track that was present in the oligouchiectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Notl site and the oligo-dT track served to identify it as a clone from the normalized medulla library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research POLYA-Yes.

| /clone llb="Triticum and leaf; Vector: pCMV.SPORT6;
| /clone for growth: Seeds were germinated in a water-saturated mix (50% black earth and 50% ProMix) in a growth chamber for 7 days under an irradiance of 200 mmol or sec-1. The temperature was maintained at 20 degrees C with a 15-hr photoperiod under a relative humidity of 70%. After this period watering of plants was stopped. Four time points were sampled during a two week period; the first effer willing was observed and the last, two weeks later, consisted of live crown and leaf tissue (leaf tissue that was yellow was not included in sampled material). First strand synthesis in this library was done in the presence of methylated dCTP thereby protecting from internal cleavage with NotI."

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [37,799].

UI-R-CNO-bml-a-02-0-UI.S1 UI-R-CNO Rattus norvegicus cDNA clone
UI-R-CNO-bml-a-02-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Email: bence-soarces@ulowa.edu
The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized bladder library cDNA library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                /note=_organ: stomach normal, Vector: puc18; Site_1: Smal; Site_2: Smal; A mini-Tibrary was made by cloning products derived from ORSTES PCR (U.S. Letters Patent application No. 196,716 - Endwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and CDNA amplification were performed under low stringency conditions.

CDNA Library Preparation: M.B. Scares Lab Clone distribution:
Clones will be available through Research Genetics (www.resgen.com)
This clone is also available through the I.M.A.G.E. Consortium at
LiML (Info@ninge.llnl.gov): IMAGE ID= 1790988
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT773 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rattus norvegicus (Norway rat)

polylinker; Site_l: Not I; Site_2: Eco_RI; The UI-R-Y0
library is a subtracted library derived from an
individually-tagged normalized whole-eye (minus the lens)
library. The driver for the subtraction consisted of a
pool of all previous libraries (UI-R-A) UI-R-E0,
UI-R-E1, UI-R-C0, and UI-R-C1). The tag is a string of
J-5 nucleotides present between the Not I site and the
oligo-dT track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-Y0) was constructed as follows: PCR
amplified cDNA inserts from previous library of ones from
which 3' ESTS had been derived whole-eye library in
the form of single-stranded circles. The remaining
single-stranded circles (subtracted library) was purified
by hydroxyapatite column chromatography, converted to
double-stranded circles and electroporated into DH10B
bacteria (Life Technologies) to generate the UI-R-Y0
library. This procedure has been previously described
library. This procedure has been previously described
library. This procedure has been previously described

Detecting a polymorphism in a gene encoding the lkappaB kinase-complex-associated protein is used to diagnose and identify carriers of familial dysautonomia.

Claim 7; Page 9; 16pp; English

The invention provides a method for detecting a polymorphism linked to a disruptive mutation in a gene encoding the ItappaB kinase-complex.

a disruptive mutation in a gene encoding the ItappaB kinase-complex.

a sociated protein (IKAP) on chromosomes with the major FD haplotype, a IKAP-encoding gene showed, in chromosomes with the major FD haplotype, a IKAP-encoding gene showed, in chromosomes with the major FD haplotype, a CT to C transition in position of of the donor splice site of intron 20.

This mutation (2507+6T to C) results in the generation of an IKAP mRNA in which exon 20 is spliced out along with intron 20. Sequence analysis of the IKAP gene of individuals heterozygous for the Profession of most common minor haplotype (minor 2) showed a G to C transversion of not encounted in a property and property of the reported IKAP CNNA, resulting in an a Argósspro aminor able substitution and disruption of a consensus Ser/hhr kinase phosphorylation site. The present sequence is a primer that can be used in a claimed method for detecting a disruptive mutation in the IKAP gene, using single-strand conformational polymorphism (SSCP) analysis.

The primer was used in the genotype analysis of FD alleles. Use with the probands homozygous for the major and minor 2 FD reports were homozygous for the major haplotype, all affected individuals were homozygous for the major and minor 2 FD cother parent and the proband were heterozygous for the major and minor 2 FD cother parent and the proband were heterozygous for the major for the probands were homozygous for the major FD haplotype and minor 2 FD cother parent and the proband were heterozygous for the major for the probands were common for the major for the probands were common for the major for the probands were homozygous for the major for the probands were homozygous for the major for the probands were homozygous for this mutation, and 4 siblings of the probands were homozygous for the major and the 2507+6T to C mutation of the presence of 25 carriers of 2507+6T to ö Gaps ö Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
 à
                                                                                                                                                         The present invention relates to methods and compositions useful for detecting mutations which cause Familial Dysautonomia (FD, Riley-Day syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) (OWIM) Syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) (OWIM) Care associated with FD. The mutations in the NERAP gene (see AB080565) are associated with FD. The mutation associated with the major haplotype of FD. FDI mutation, is a base pair (bp) mutation, where the thymine of FD. FDI mutation, is a base pair (bp) mutation, where the thymine of FD. The results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type message in a tissue-specific manner. The mutation associated with the minor haplotype, FD2 mutation, is a bp mutation where the guanine nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. This by mutation causes an arginine to proline missense mutation (R696P) in the IKBKAP protein, which is predicted to disrupt a potential phosphorylation site. The IKBKAP nucleic acid sequences are useful for identifying a subject with FD and for rapid carrier screening. The IKBKAP sequence was not shown in the specification, but was derived from the human wild-type IKBKAP sequence given in Fig 6 human wild-type IKBKAP sequence given in Fig 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                     New IKBKAP genes with mutations, useful for identifying a subject with familial dysautonomia (FD), or for rapid carrier screening in the Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or prenatal diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; IKBKAP; Familial Dysautonomia; FD; Riley-Day syndrome;

The present invention relates to methods and compositions useful for detecting mutations which cause Familial Dysautonomia (FD, Riley-Day syndrome, Heredditary Sensory and Autonomic Neuropathy Type III) [OMIN 223900]. It was found that mutations in the IKBKAP gene (see ABQ80565) are associated with FD. The mutation associated with the major haplotype of FD mutation, here the thymine of FD FD mutation, where the thymine cof FD; FD mutation, where the thymine of intron of intron of oin the IKBKAP gene is replaced with a cytosine. This results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type corresponds in a lissue-specific manner. The mutation, where the quanthe minor haplotype, FD2 mutation, is a bp mutation, where the guanthe conclectide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine. This bp mutation associated with a cytosine. This bp mutation associated with a cytosine. The IKBKAP protein, which is predicted to disrupt a potential consumes an aubject with FD and for rapid carrier screening. The IKBKAP contains 37 exons and maps to chromosome 9931. Note: the present sequence was not shown in the specification, but was derived from the thuman wild-type IKBKAP sequence given in F19 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                       New IXBKAP genes with mutations, useful for identifying a subject with familial dysautonomia (FD), or for rapid carrier screening in the Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or prenatal diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; IKBKAP; Familial Dysautonomia; FD; Riley-Day syndrome;

                                                                                                                                                                                                                                                                                                                                                       The present invention relates to methods and compositions useful for detecting mutations which cause Familial Dysautonomia (FD, Riley-Day syndholds) and Autonomic Neuropathy Type III) [OMIM Syndhold II was found that mutations in the NEERAP gene (see ABQ80565) are associated with FD. The mutation is absenged with the major haplotype of FD. FDI mutation, is a base pair (bp) mutation, where the thymine nucleotide located at bp 6 of intron 20 in the IKBKAP gene is replaced with a cytosine. This results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type message in a tissue-specific manner. The mutation associated with the minor haplotype, FD2 mutation, is a bp mutation associated with a cytosine. This bp mutation causes an arginine to proline missense mutation (R696P) in the IKBKAP process, which is predicted to disrupt a potential phosphorylation site. The IKBKAP nucleic acid sequences are useful for identifying a subject with FD and for rapid carrier screening. The IKBKAP gene contains 37 exons and maps to chromosome 9931. Note: the present sequence, was not shown in the specification, but was derived from the
                                                                                                                                           New IKBKAP genes with mutations, useful for identifying a subject with familial dysautonomia (FD), or for rapid carrier screening in the Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or prenatal diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 66479 BP; 18271 A; 12400 C; 14128 G; 21680 T; 0 U; 0 Other;

Human; IKBKAP; Familial Dysautonomia; FD; Riley-Day syndrome; Hereditary Sensory and Autonomic Neuropathy Type III; carrier screening; gene; chromosome 9931; ds.

The present invention relates to methods and compositions useful for detecting mutations which cause Familial Dysautonomia (PD, Riley-Day Syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM 233900]. It was found that mutations in the IKBAAP gene (the present sequence) are associated with FD. The mutation associated with the major haplotype of FD, FDI mutation, is a base pair (bp) mutation, where the thymine nucleotide located at bp 6 of intron 20 in the IKBAAP gene is replaced with a cytosine. This results in skipping of exon 20 in the mRNA from FD patients, although they continue to express varying levels of wild-type message in a tissue-specific manner. The mutation associated with the minor haplotype, FDZ mutation, is a bp mutation, where the cytosine. This bp mutation causes an arginine to proline missense mutation (R696P) in the IKBKAP protein, which is predicted to disrupt a potential phosphorylation site. The IKBKAP undled capid carrier screening. The IKBKAP gene contains 37 exons and maps to chromosome 9431 ; New IKBKAP genes with mutations, useful for identifying a subject with familial dysautonomia (FD), or for rapid carrier screening in the Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or prenatal diagnosis. c acids encoding human immune/hematopoietic antigen polypeptides, for preventing, diagnosing and/or treating cancers and metastasis. Nucleic auseful fo

Disclosure; SEQ ID NO 24669; 3071pp + Sequence Listing; English.

AAMS1951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or complement the patients own production of (I). Additionally, (I) supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially

The invention relates to an isolated polynuclectide (I) comprising: (a) any of a group of over 4000 nuclectide sequences (ABV94628-ABV99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences that hybridize to (a), under moderately to (a); or (f) degenerate variants of (a). Polypeptides (ABP6856-ABF68637) encoded by (I) and oligonuclectide can be used to detect cancer in a patient and compositions comprising polypeptides, polynuclectides, antibodies, fusion proteins, T cell populations and antigon presenting cells expressing the polypeptide are useful in treating pancreatic cancer probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the tumour cells, in vaccines and for gene
                           to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and pancreatic tumor polypeptides, useful for diagnosing, preventing and/or treating cancer, particularly pancreatic
cancers and cancer metastases of haematopoietic-derived cells. AAK64703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; pancreas; cancer; gene therapy; vaccine; immunostimulant;

Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the the prince of the full spatent did not form part of the prince data for this parent did not form part of from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         830 Primers useful for synthesizing full length cDNA clones and their use
therapy. Note: The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly

This invention describes novel nucleic acid (cDNA) sequences (A) which have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a tissue. Associated with the human obtain tumor CDNA library derived EST fragments represented in AAY76505-Y76638
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid sequences expressed in ovarian, and some other, cancer tissues, and derived polypeptides, for treatment of ovarian cancer and identification of therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, chromosome mapping, gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA from clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New oligonuclectide primers (830 cDNAs) useful for synthesizing full length human cDNAs.

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for spressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amin acid sequences. AASS4197-AASS94564 represent novel human diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     amino acid sequences. ÅAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; SEQ ID NO 19697; 103pp; English.

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

Claim 1; SEQ ID NO 229; 44pp; English.

The present invention describes a method (M1) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in Abl61664 to Abr70110), or is at least S\$ identical to (S), where a change in corpression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used for producting a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such properties of the agent. M1 can be used in the treatment of cancer such properties of the agent, M1 can be used in the treatment of cancer such prostate or pancreatic cancer, adenocarcinoma, clear cell cancer, infiltrating lobular cancer, squamous

                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where differential expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in GS; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from GS, where the level of expression of the gene is indicative of inflammation; (4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an
                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity.

is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful

CC for screening an agent capable of modulating GA, M3 is useful

CC inflammation in a tissue, M4 is useful for detecting an inflammation

CC inflammation in a tissue, M4 is useful for detecting an inflammation

CC specially chronic; in a tissue, an allergic response in a subject,

CC sporiasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,

CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult

CC disease, ulcerative colitis, periodontal disease, Crohn's

CC disease, ulcerative colitis, periodontal disease; also bacterial

CC disease, ulcerative colitis, periodontal disease; also bacterial

CC fungal infection and M5 is useful for treating one of the above

CC onditions. The present sequence represents a gene differentially

CC fungal infection wide: Note: The sequence data for this patent did

CC onditions. The present sequence represents a gene differentially

CC form part of the printed specification, but was obtained in

The present sequence is that of pig nor-1 nuclear receptor nucleic acid AJ011767. Nor-1 has been identified as a molecular target for therapeutic intervantion in the treatment of myeloid leukaemia. The invention provides methods of inhibiting the proliferation of a haematopoietic stem cell or a haematopoietic myeloid cell by modulating the level of a nor-1 and/or nur77 nuclear receptor. This involves increasing the level of the receptor polypeptide or polynucleotide, e.g. by administration of a vector comprising the polynucleotide. A claimed method of treating leukaemia comprises modulating a nor-1 and/or nur77 nuclear receptor in a haematopoietic stem cell or myeloid cell. Also claimed are methods of identifying an upregulator of expression of nor-1 and/or nur77, of identifying a compound for the treatment of leukaemia, and of screening for a compound for the treatment of leukaemia, and of screening
hyper IgM, transient hypogammaglobulinemia of infancy, Burkitt's lymphoma, intermediate lymphoma, follicular lymphoma, type II hyppersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic anaemia, mysathemia gravis, hypoadcenocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO proteins are also useful for preparing a medicament for treating a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inhibiting proliferation of a hematopoietic cell, useful for treating or preventing leukemia, comprises modulating the level or activity of nor-1 and/or nur?? nuclear receptor.

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX aequences have activities such as: cytostatic; hepatotropic; vulnerary; antiposoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory, antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic.                          to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyridism, cholesterol ester storage, systemic lupus erychematosus, severe combined immunodeficiency (SCID) AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal heamoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ል
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Signal sequence trap method; SST method; immunisation; inhibition; infection; allergy; cancer; regulation; tissue formation; tissue repair; activin activity; inhibin activity; chemokine activity; cytokine activity; blood coagulation regulation; agonist; antagonist; metabolic disorder; hormonal disorder; immune disorder; severe combined immunodeficiency; SCID; AIDS; thrombosis; cancer; wound;

The polypeptides have a broad range of physiological activity, including immunisation against and inhibition of infections, allergies and cancer; regulation of tissue formation and repair; activininhibin activity; chemokine/cyrokine activity; blood coagulation regulation, and receptor/ligand agonist or antagonist activity. The polypeptides can be used for prevention and treatment of disorders including infections by bacteria, yeasts and

The polypeptides have a broad range of physiological activity, including immunisation against and inhibition of infections, allergies and cancer; regulation of tissue formation and repair; activin/inhibin activity; hond coagulation regulation, and receptor/ligand agonist antagonist activity. The polypebtides can be used for prevention and treatment of disorders including infections by bacteria, yeasts and viruses (including HIV) and protozoa metabolic and hormonal disorders; immune disorders (including severe combined immunodeficiency (SCID) and AIDS; thrombosis; cancer; and traumatic or surgical wounds
                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Signal sequence trap method; SST method; immunisation; inhibition; infection; allergy; cancer; regulation; tissue formation; tissue repair; activin activity; inhibin activity; dhemokine activity; cytokine activity; blood coagulation regulation; agonist; antagonist; metabolic disorder; hormonal disorder; immune disorder; severe combined immunodeficiency; SCID; AIDS; thrombosls; cancer; wound;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptides identified by the signal sequence trap method from a human cDNA library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to the sequences of several cDNAs that are differentially expressed in activated T cells. The sequences of the invention may have antiallergic, cytostatic, immunosuppressive and antimicrobial activity and may be used in gene therapy. The invention also comprises a method for screening samples for differentially expressed genes and a method for detecting these cDNAs by hybridisation. The methods and compositions of the present invention are useful for diagnosing, treating, staging or monitoring treatment for allergy, disorders. The present sequence represents a cDNA of the invention that is differentially expressed in activated T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 5642 BP; 1472 A; 1399 C; 1212 G; 1465 T; 0 U; 94 Other;

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supperfue in tissue, as molecular weight markers and as a food of stees expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on but and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amino acid sequences. RESULT 20 AAS65659 ID AAS65

```
The invention relates to a combination comprising several polymucleotides calmedulin gene, human mRNA for KIRA4030 protein, leakotriene A4 hydrolase, human CGI-142 protein mRNA, human X+ channel beat 2 subunit can be their complements. The cDNAs are differentially expressed in LPS (lipopolysaccharide)-treated foam cells. Also included are obtaining an extended or full length gene from a library of nucleic acid sequences, an expression vector containing the nucleic acids, an extended or full length gene from a library of nucleic acid sequences, an expression vector containing the nucleic acids, and ADE25751, producing a protein by culturing the host cell, and a composition comprising a protein by culturing the host cell, and a composition comprising a protein by culturing the host cell, and a composition comprising a protein by culturing the host cell, and a composition comprising a protein by culturing the most cell, and a composition comprising a protein action are useful for a high throughput screening of a library of molecules or compounds to differential expressed nucleic acids are useful for high throughput screening of a library of molecules or compounds to identify a ligand which binds a polynuclectide. The library is chosen content for a high throughput screening of library of molecules or compounds to useful for a high throughput screening of library of molecules or compounds to identify at least one ligand which specifically binds a compounds to identify at least one ligand which specifically binds a protein setul for main diagnosing a protein for main and long and antibody. The form cell-expressed nucleic acids are useful for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               foam cell-expressed nucleic acids are useful for diagnosing cardiovascular disorder. The foam cell-expressed nucleic acids are useful as elements on a microarray which can be used for detecting related polynucleotide in a sample, diagnosing cardiovascular disease,
                                                                                                        Human; ss; differential expression; foam cell; LPS; lipopolysaccharide; cardiovascular disease; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Combination containing several polynucleotide that are differentially expressed in foam cells and complements of the polynucleotides, useful for diagnosing cardiovascular disease or atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              84.0%; Score 16.8; DB 10; Length 5828; 90.0%; Pred. New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 825; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) is useful in gene therapy techniques to restore normal control in its useful in gene therapy techniques to restore normal control in its useful in gene therapy techniques to restore normal consequity of (II) of (III) of (IIII) of (III) of ( slectronic format directly from WIPO at ttp.wipo.int/pub/published\_pct\_sequences

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in some therapy reciping or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating or polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations are responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and among a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the products dependent on DNA and and a managed to the product of the products dependent on DNA and and a managed to the product of the products dependent on DNA and and a managed to the product of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amino acid sequences. Å$64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

New isolated human differentially-regulated breast cancer polynucleotide and polypeptide, useful for diagnosing, staging, prognosticating, preventing and/or treating diseases and conditions relating to breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotides which are differentially-regulated in breast cancer. The methods and compositions of the present invention are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACC72012-ACC72074 represent polynucleotides of the invention that are this patent did not form part of the printed specification, but was obtained in electronic formed directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SET; PN12218; TTP; CIN85; PN13734; TIAR; FUBP1; antiinflammatory;
